

Micromusée

Micromusée is a Collection management system dedicated to all types of collections: Fine & Decorative Arts, Archaeology, Ethnography and Industry and Technique, Natural Science or specialised collections.

Micromusée focuses on three aspects:

- Object information (technical information, descriptive, analytical and historical) in order to facilitate the inventory and the retrieval,
- The object within the institution (location, conservation status, movement control, etc.),
- Online diffusion: E-catalogue and Web interface.

Micromusée is delivered with a default design (default list of available fields) compliant to International standard.

Application field:

Micromusée is flexible: users can apply parameters and define different data entry forms, displays and printouts.

Micromusée is multilingual: available in French, English, Dutch, Polish, German, Spanish, Portuguese and Arabic, an optional menu allows to swap from one language to another. It may be easily translated into other languages.

Main Functions:

- Complete description of the object
- Management of acquisitions, deposits and loans
- Management of authority files
- Management of reference tables
- Full documentary search
- Printing / Export ASCII / Report
- Multimedia (image, video, sound) and external links
- A wide range of parameters
- Data exchange (authority files, thesauri, records)
- Confidentiality and security

Optional Modules:

- Conservation / Restoration
- Object movement control
- Indemnity management
- Import / Export (off-line data input, exchanges)
- OPAC kiosk, E-Catalog and OPAC Web
- MUM: Intercommunication between applications

Mobydoc:

Founded in 1985, the company focuses its activity on the development of collection management systems dedicated to **Museums, Libraries, Archives, Documentation Centres and Private collections.**

Now Mobydoc products and services have been chosen by more than 500 museums, galleries and libraries in 14 countries: France, Algeria, Belgium, Great Britain, Portugal, Spain, Switzerland, Monaco, Poland, Canada and Quebec, Morocco, Sri Lanka, Zimbabwe, Cambodia.

Mobydoc proposes **standard** applications in order to guarantee their evolution and maintenance as long as their conformity to national/international standards.

The family of **Mobydoc** products is developed in a modular manner, based on core subroutines, which maximises development effort and minimises support overheads. **Mobydoc** continues development of all their products with an annual major feature release.

Services provided:

- Installation and parameters,
- Training regarding your needs,
- Conversion available on request (import of your database in Micromusée),
- Maintenance: telephone and e-mail help line for documentation and technical questions, plus an annual release.

Mobydoc clients can exchange their experience at the occasion of the **UK Users Group**, two meetings per year. The Director of the company presents new functions once a year, during the autumn meeting.

They can also meet Mobydoc on our stand at the occasion exhibitions in the UK and France (SITEM in Paris each January).

Other types of support are provided, free of charge:

- Mobydoc Users Group in France,
- UK Newsletter,
- Intranet with FAQ and Forum.
